The title of the book - "a crude look at the whole" - is actually a quote from the physicist Murray Gell-Mann and it very accurately describes how we need to deal with complex systems. We do need to take a look at the whole, but this look also cannot be too fine-grained; it needs to be pointillistic and crude.

In *A Crude Look at the Whole*, social scientist and economist John H. Miller shows why we need to start looking at whole pictures. For one thing, whether we are talking about stock markets, computer networks, or biological organisms, individual parts only make sense when we remember that they are part of larger wholes.

A top expert explains why a social and economic understanding of complex systems will help society to anticipate and confront our biggest challenges Imagine trying to understand a stained glass window by breaking it into pieces and examining it one shard at a time. While you could probably learn a lot about each piece, you would have no idea about what the entire picture looks like. This is reductionism -- the idea that to understand the world we only need to study its pieces -- and it is how most social scientists approach their work. In A Crude Look at the Whole, social scientist and economist John H. Miller shows why we need to start looking at whole pictures. For one thing, whether we are talking about stock markets, computer networks, or biological organisms, individual parts only make sense when we remember that they are part of larger wholes. And perhaps more importantly, those wholes can take on behaviors that are strikingly different from that of their pieces. Miller, a leading expert in the computational study of complex adaptive systems, reveals astounding global patterns linking the organization of otherwise radically different structures: It might seem crude, but a beehive's temperature control system can help predict market fluctuations and a mammal's heartbeat can help us understand the "heartbeat" of a city and adapt urban planning accordingly. From enduring racial segregation to sudden stock market disasters, once we start drawing links between complex systems, we can start solving what otherwise might be totally intractable problems. Thanks to this revolutionary perspective, we can finally transcend the limits of reductionism and discover crucial new ideas. Scientifically founded and beautifully written, A Crude Look at the Whole is a powerful exploration of

"A father searches for his addict son while grappling with his own choices as a parent (and as a user of sorts)"--

On a time limit to resolve a conflict between his girlfriend's project, an American Collider, and his own instinct for danger, Nick Litchfield uses his latest invention to fight a giant. A brilliant scientist, his past life experiences and his youthful use of the hallucinogenic drug, ayahuasca, plus his core of international friends, help him to fight his nemesis, Andrew Troy, and his wealthy foundation whose investment in the Collider he intends to protect at any cost. A mystery set in New York, London and the Colombian borders, leads the reader to the very last pages before it is resolved.

In Volume I of this special collectors' edition, visit the terrifying world of John Connolly's #1 internationally bestselling thrillers: *Every Dead Thing*, *Dark Hollow*, and *The Killing Kind*. *EVERY DEAD THING* Haunted by the unsolved slayings of his wife and young daughter, and tormented by his sense of guilt, former NYPD detective Charlie Parker is a man consumed by violence, regret, and the desire for revenge. But when his ex-partner asks him to track down a missing girl, Parker embarks on an odyssey that leads him to the heart of organized crime; to an old black woman who dwells by a Louisiana swamp and hears the voices of the dead; to cellars of torture and murder; and to a serial killer unlike any other, an artist who uses the human body as his canvas and takes faces as his prize, the killer known only as the Traveling Man. *DARK HOLLOW* Haunted by the murder of his wife and daughter, former New York police detective Charlie Parker retreats home to Scarborough, Maine, to rebuild his shattered life. But his return awakens old ghosts, drawing him into the manhunt for the killer of yet another mother and child. The obvious suspect is the young woman's violent ex-husband. But there is another possibility—a mythical figure who lurks deep in the dark hollow of Parker's own past, a figure that has haunted his family for generations: the monster known as Caleb Kyle.... *THE KILLING KIND* When the discovery of a mass grave in northern Maine reveals the grim truth behind the disappearance of a religious community, Charlie Parker is drawn into vicious conflict with a group of zealots intent on tracking down a relic that could link them to the slaughter. Haunted by the ghost of a small boy and tormented by the demonic killer known as Mr. Pudd, Parker is forced to fight for his lover, his friends...and his very soul.

The Fischer-Tropsch process is gaining recognition again due to the world-wide increase in energy needs and decrease in oil availability. The increasing interest in utilizing biomass as a potential renewable feedstock in energy generation is further supporting this development. The book covers the production and refining of Fischer-Tropsch syncrude to fuels and chemicals systematically and comprehensively, presenting a wealth of new knowledge and material. As such, it deals extensively with aspects of engineering, chemistry and catalysis. This handbook and ready reference adopts a fundamental approach, looking at the molecules and their transformation from feed to product. Numerous examples illustrate the possibilities and limitations of Fischer-Tropsch syncrude as feedstock. Of great interest to everyone interested in refining - not just Fischer-Tropsch specialists. From the Contents: Fischer-Tropsch Facilities and Refineries at a Glance Production of Fischer-Tropsch Syncrude Industrial Fischer-Tropsch Facilities Synthetic Transportation Fuels Refining Technology Refinery Design

Writing this book would have been impossible without the help of certain institutions and persons. For a gas-producing and oil-processing country like the Netherlands, there was surprisingly very little, publicly available, research material. Public libraries' collections contained, with a certain degree of inconsistency, little of the more specialised sources. I would therefore like to express my gratitude towards Royal Dutch Shell, and especially the library staff in The Hague, for allowing me to use the company's library, thanking them for their assistance in finding and supplying the required data. I am also grateful for the financial assistance of the 'Nederlandse organisatie voor wetenschappelijk onderzoek' (NWO) and the Faculty of Law of the University of Leiden. They provided the financial means to work a (crucial) month in the very well equipped library of the Oxford Institute for Energy Studies. I am indebted to the staff of the Oxford Institute for Energy Studies, and particularly to Robert Mabro and Jeremy Turk, for their comments, support, and friendship. After I spent a month in the Institute in July 1989, I was able to return for two five-month periods in 1990 and 1991. For both periods, the Oxford Institute and the Leiden Law Faculty provided me with the necessary means. I would also like to express special gratitude to some people who have been a great support and supplied me with valuable comments at various stages of the study.
