Once you have  
the data loaded

analysis. The  
term often  
applied to this  
messing around  
with the data is  
called wrangling

Understand the split-apply-combine concept for data

analysis. Use `summarize`, `group_by`, and `tally` to split a data frame into groups of observations, apply a summary statistics for each group, and

then combine the results. Produce scatter plots, line plots, and histograms using ggplot. Set universal plot settings.
