Exploring care is such a foundational aspect of our work that we have already launched a spinoff company, Cityblock Health, focused on community-based care in underserved urban communities. Sidewalk Labs recently partnered with a Toronto-based firm, Idea Couture , to learn more about how neighborhoods can truly be drivers of community well-being and, by extension, individual health.

In *Being Urban*, Simon Goldhill and his team of outstanding urbanists explore the meaning of the urban condition, with particular reference to the Middle East. As Goldhill explains in his introduction, 'What is a good city?', five questions motivate the book: How can a city be systematically planned and yet maintain a possibility of flexibility, change, and the wellbeing of citizens? How does the city represent itself to itself, and image its past, its present and its future? What is it to dwell in, and experience, a city? How does violence erupt in and to a city, and what strategies of reconciliation and reconstruction can be employed? And finally, what is the relationship between the infrastructure of the city and the political process? Following the introduction, the twelve

chapters are grouped into four sections: Engagement and Space; Infrastructure and Space; Conflict and Structures; and Curating the City. Through each chapter, the contributors reflect on aspects of urban infrastructure and culture, citizenship, belonging and exclusion, politics and conflict, with examples from across the Middle East, from Cairo to Tehran, Tel Aviv to Istanbul. Not only will Being Urban further understanding of the topography of citizenship in the Middle East and beyond, it will also contribute to answering one of today's key questions: What Is A Good City?

Community Colleges features case studies of six prototypical urban community college systems, exploring how they meet the educational and training needs of an increasingly diverse ethnic and racial community. The studies shed light on the key issues faced by urban community colleges, including the impact of city, state, and federal forces on the vitality of the college; how to create an urban social agenda with scarce resources; and how to provide equal access to all while strengthening accountability. This is the 107th issue of the Jossey-Bass series New Directions for Community Colleges.

The city is an always changing human experiment. But in the last half century, it has changed more than ever before - with little sign of slowing down. As this phenomenon takes place,

an increasing number of architects, innovators and policy-makers are rethinking the city to make the most of space and resources. This book chronicles the design of urban futures. From apps designed to curb food waste to inventive fresh water infrastructure, The Ideal City explores the many initiatives and experiments, all with the shared goal of making the cities of tomorrow a happier, healthier and more inclusive place to be.

First published in 1985, this book explores the 'lived culture' of urban black students in a community college located in a large northeastern city in the United States. The author immersed herself in the institution she was studying for a full academic year, exploring both the direct experiences of

education, and the way these experiences were worked over and through the praxis of cultural discourse. She examines in detail the messages of the school, including the 'hidden curriculum' and faculty perspectives, as well as the way these messages are transformed at a cultural level. The resulting work provides a major contribution to a number of debates on education and cultural and economic reproduction, as well as a leap forward in our understanding of the role schooling plays in the re-creation of race and class antagonisms. This work will be of great interest to anyone working with minorities, particularly in the context of education.

Within a relatively short time, urban anthropology has

emerged as one of the most vital fields of anthropology. During its formative period, however, it has lacked intellectual coherence. Exploring the City is a bold first attempt to provide just such a coherent and unified theoretical understanding of urbanism. Hannerz draws upon the urban perspectives of other disciplines as well, such as history, sociology, and geography, to bring intellectual unity to the history and development of urban anthropology.

This book explores the intersections of urban development, travel patterns, and health. Currently, there is a lack of research concerning the subjective dimensions of accessibility in urban environments and travel behavior, as well as travel-related outcomes. Antipova fills this gap in the

scholarship by developing an analysis of satisfaction and perception-related indicators at an intraurban level. Specifically, she investigates various aspects of urban environment from the perspective of resident perception and satisfaction, as well as the relationship between urban environment, travel behavior, activity patterns, and traveler health.

This book expands the current frame of reference of remote sensing and geographic information specialists to include an array of socio-economic and related planning issues.
