This book analyses the political transition in West Bengal, India, which witnessed longest democratically elected Left regime of the world. It examines and compares micro-dynamics of political practices in India and delineates underlying political themes of state politics. The author explores the politics of land reform and the anti-land-acquisition movements which were critical points in the contemporary history of Bengal in independent India. The volume further delves into the caste and communal politics which had been latent until the Left Front's loss in the state, as well as the what sets apart politics in West Bengal from other Indian states. Based on thorough ethnographic research, this volume will be of great interest to scholars and researchers of South Asian studies, politics and political processes, sociology and social anthropology.

This book discusses various climate smart agro-technologies, their technical and economic feasibility across heterogeneous agro-climatic conditions, assessing farmers' willingness to adopt those technologies, impact of climate smart technology in agricultural production and possible policy and investment opportunities to upscale it. Containing eight chapters, the book starts with a discussion about the methodological aspects of priority setting of the farm technologies across various regions of South Asia including Eastern Indo-Gangetic plain, Western Indo-Gangetic Plain and arid regions. Using data from field based trials and expert solicitations, the book next deliberates on a list of feasible technologies, assessed by constructing climate smart Feasibility Index. Further on, there is an analysis, using stated preference method, of the behaviour of farmers in adopting climate smart technologies. Preference of women farmers has been given a special focus in this book. After discussing the method priority setting of the farm technologies, impact of climate smart technologies has been analysed using real time data. Government policies have been reviewed with the view of achieving climate smart agriculture in South Asia. The book also describes the optimization modelling framework for investment allocation and technology prioritization. The model integrates both the bio-physical and the economic optimization model to capture the agro-climatic heterogeneity within the region and the variability of technical feasibility across regions and crops. Results of this model will help policy makers to identify how much to invest, where to invest and what technologies to prioritize for investments.

If health is a prerequisite to a person functioning as an agent, inequalities in health constitute inequalities in people's capability to function -- a denial of equality of opportunity. So why should a concern with health equity be singled out from the pursuit of social justice more generally? Can existing theories of justice provide an adequate account of health equity? And what ethical problems arise in evaluating health inequalities? These are some of the important questions that this book addresses in building an interdisciplinary understanding of health equity. (Midwest).

Wheat Blast provides systematic and practical information on wheat blast pathology, summarises research progress and discusses future perspectives based on current understanding of the existing issues. The book explores advance technologies that may help in deciding the path for future research and development for better strategies and techniques to manage the wheat blast disease. It equips readers with basic and applied understanding on the identification of disease, its distribution and chances of further spread in new areas, its potential to cause yield losses to wheat, the conditions that favour disease development, disease prediction modelling, resistance breeding methods and management strategies against wheat blast. Features: Provides comprehensive information on wheat blast pathogen and its

management under a single umbrella Covers disease identification and diagnostics which will be helpful to check introduction in new areas Discusses methods and protocol to study the different aspects of the disease such as diagnostics, variability, resistance screening, epiphytotic creation etc. Gives deep insight on the past, present and future outlook of wheat blast research progress This book's chapters are contributed by experts and pioneers in their respective fields and it provides comprehensive insight with updated findings on wheat blast research. It serves as a valuable reference for researchers, policy makers, students, teachers, farmers, seed growers, traders, and other stakeholders dealing with wheat.

The colonial legacy in the construction of the modern Indian state has left a deep imprint on contemporary Indians' self-identity and self-determination. *Borderland Politics in Northern India* is a collection of essays, giving detailed accounts of the many different ways that people throughout India understand their homeland, the territory where they live, and the broader region to which they belong. Mona Chettri looks at the Gorkha community in the Darjeeling hills to the northeast, Manjeet Baruah examines Assam, and L. Lam Khan Piang explores the dispersion of the Zo people throughout many northeastern states. In the northwest, Aijaz Ashraf Wani illustrates how Jammu and Kashmir state is severed along complex regional, religious, and ethnic lines. This book is an invaluable source for readers interested in comparative studies of borderlands globally. It also contributes to South Asian studies broadly conceived, to Indian border studies, and to local social, cultural, and political histories of the constituent border regions of Northern India. This book was published as a special issue of *Asian Ethnicity*.
