I worked for decades as psychoanalyst and researcher in forensic psychiatric settings with psychopaths. I was fascinated by those psychopaths who were cured and wrote my PhD-thesis about remission in psychopaths, which is a very rare phenomenon, indeed. I was astonished about the simplicity of ideas and misconceptions about psychopathy of other scholars. I knew from my own and other psychopaths

Informal, non-academic and non-clinical settings are important because the psychopaths I investigated hate formal academic and clinical settings

disappearance of all such manifestations of disease. The case reports of remitted criminal and noncriminal psychopaths which are presented in this book are the only examples of real remission in a sample 667 patients which were treated in a forensic psychiatric hospital between 1966 and 1995 . This a percentage of just nearly 2% . They might become “weller than well” as Karl Menninger called this phenomenon in his study of remitted in schizophrenic patients. This means that these patients are not just cured, but their life as very much enriched by the experience of conquer the disorder and self-transformation. They will continue improve still further.
