The breadth of material encompasses voices of service users, professional and lay carers, as well as academics and researchers. This Second Edition is organised into four new sections, each with a part introduction pulling together the main themes: - People focuses on those who use and provide health and social care services. - Places looks at where care is given - Approaches considers different ways through which care takes places - Ideas focuses on the ideas and policies that underpin care provision Full of real practice scenarios and examples, the book successfully makes the links between theory and practice, and will be an essential resource for all students studying at undergraduate level across the wide spectrum of health and social care.

This book examines the current state of American health care using a social science lens to focus on the interdependent, intercultural, economic, and communication aspects of access and delivery. This text explores how the cultures of health care organizations, health professions, governments, and capitalism, as well as communication, all contribute to a disease-focused, economically driven, technology-centered health care system. It seeks to understand 21st century health care from a macro-level view based on historical realizations and the current plethora of interdependent, but self-serving realities that provide few, if any, incentives for organizational collaboration and change. The fact that the most expensive health care system in the world does not provide the healthiest outcomes is a driving force in this exploration. By reflecting on American values and beliefs regarding health care from philosophical, clinical, communication, and cost perspectives, this text is designed to encourage an organizational transformation at every level, from government to providers to patients. This comprehensive survey is an important guide for those studying, or working in, health care professions, as well as health care policy and administration. It should also be of interest to any reader who seeks to better understand U.S. health care policy from social science, economic, and/or health communication perspectives.

*Integrating Social Care into the Delivery of Health Care: Moving Upstream to Improve the Nation's Health* was released in September 2019, before the World Health Organization declared COVID-19 a global pandemic in March 2020. Improving social conditions remains critical to improving health outcomes, and integrating social care into health care delivery is more relevant than ever in the context of the pandemic and increased strains placed on the U.S. health care system. The report and its related products ultimately aim to help improve health and health equity, during COVID-19 and beyond. The consistent and compelling evidence on how social determinants shape health has led to a growing recognition throughout the health care sector that improving health and health equity is likely to depend "at least in part" on mitigating adverse social determinants. This recognition has been bolstered by a shift in the health care sector towards value-based payment, which incentivizes improved health outcomes for persons and populations rather than service delivery alone. The combined result of these changes has been a growing emphasis on health care systems addressing patients' social risk factors and social needs with the aim of improving health outcomes. This may involve health care systems linking individual patients with government and community social services, but important questions need to be answered about when and how health care systems should integrate social care into their practices and what kinds of infrastructure are required to facilitate such activities. *Integrating Social Care into the Delivery of Health Care: Moving Upstream to Improve the Nation's Health* examines the potential for integrating services addressing social needs and the social determinants of health into the delivery of

health care to achieve better health outcomes. This report assesses approaches to social care integration currently being taken by health care providers and systems, and new or emerging approaches and opportunities; current roles in such integration by different disciplines and organizations, and new or emerging roles and types of providers; and current and emerging efforts to design health care systems to improve the nation's health and reduce health inequities.

The need for informed analyses of health policy is now greater than ever. The twelve essays in this volume show that public debates routinely bypass complex ethical, sociocultural, historical, and political questions about how we should address ideals of justice and equality in health care. Integrating perspectives from the humanities, social sciences, medicine, and public health, this volume illuminates the relationships between justice and health inequalities to enrich debates. *Understanding Health Inequalities and Justice* explores three questions: How do scholars approach relations between health inequalities and ideals of justice? When do justice considerations inform solutions to health inequalities, and how do specific health inequalities affect perceptions of injustice? And how can diverse scholarly approaches contribute to better health policy? From addressing patient agency in an inequitable health care environment to examining how scholars of social justice and health care amass evidence, this volume promotes a richer understanding of health and justice and how to achieve both. The contributors are Judith C. Barker, Paula Braveman, Paul Brodwin, Jami Suki Chang, Debra DeBruin, Leslie A. Dubbin, Sarah Horton, Carla C. Keirns, J. Paul Kelleher, Nicholas B. King, Eva Feder Kittay, Joan Liaschenko, Anne Drapkin Lyerly, Mary Faith Marshall, Carolyn Moxley Rouse, Jennifer Prah Ruger, and Janet K. Shim.

"*Working in Health and Social Care: An Introduction For Allied Health Professionals* provides guidance to all allied health professionals including physiotherapists, radiographers, chiropodists, podiatrists, occupational therapists and speech and language therapists in understanding health and social care agendas and their career development within these areas. It discusses a wide range of topics relevant to contemporary practice, and how these sit within health and social care systems, aiming to engage the reader in thoughtful application of this information to their own learning, practice and knowledge base."--BOOK JACKET.

Effective leadership and management in health and social care are built on good practice, strong relationships and a critical understanding of the wider context in which care takes place. *Leading, Managing, Caring* illustrates how leadership and management work in everyday settings, providing invaluable support to those practising or studying in the area. The book introduces the four core building blocks of the caring manager or leader: personal awareness, team awareness, goal awareness and contextual awareness. Together these form a firm foundation for understanding and practice. Drawing on up-to-date case studies, the authors explore how critical theoretical understanding can support practical attempts to work through complex situations with a diverse range of people. Also included is a toolkit containing carefully selected and practical tools for leading and managing change. This comprehensive textbook is suitable for existing and aspiring managers and leaders in a range of health and social care professions, or anyone interested in understanding more about the complex landscape in which care services are managed and delivered in the UK.

juxtaposing the voices of a range of carers and service users with insights from academic debate and research. The Reader is divided into five sections focusing on: the experience of caring or being cared for; the environment in which care takes place; the ways in which care has been conceptualized; issues of abuse in care settings; and the pol

This book describes numerous projects which shed light on some of the most persistent issues of the day in health and social care. The work demonstrates the importance of embedding the concept of flow into everyday health and social care thinking and creates insights into patient journeys through different conditions and treatments. It suggests that improving throughput across agencies is the key way to improving the performance of health treatment, whereas increasing capacity is the key way to improving the performance of social care by retaining independent living. The authors conclude that for state-provided care, balancing health and social care provision can eliminate the many stressful fire-fighting strategies hospitals have to undertake when faced with high demands, and this is a win-win scenario in terms of patients, staff and costs. Further, that there is a need for better understanding of the dynamics of population ageing, the dynamics of health conditions and the provision of better, integrated information systems. The book will be a valuable resource for practitioners, clinicians, managers and academics in health, social work, public health and public policy in many countries. In this important book Eric Wolstenholme and Douglas McKelvie bring two lifetimes of award-winning experience in applying system dynamics to improving our very clinically advanced but often dysfunctional care systems.- David F. Andersen, O'Leary Distinguished Service Professor, Emeritus, State University of New York, Albany, USA. Health and social care suffer from some persistent and serious problems which not only undermine well intended care but also impose considerable costs in many societies. This very welcome and exceptional book offers the hope of sound and sustainable solutions to many of these issues. - Kim Warren, Strategy Dynamics, London, UK
